

Using the e-deposit scan wizard feature requires that you upgrade your Internet Explorer version 7 or use an alternate browser.

If you can't upgrade or change browsers, you can continue to use IE7 for e-deposit by scanning your checks before beginning your deposit and then using the following procedure.

IE7 E-Deposit Workaround

1 First scan the front and back of your check separately. Please ensure your scans meet the following requirements.

- JPEG format (with medium quality compression)
- Grayscale or Black & White
- Resolution of 200 or 300 DPI
- File size under 1MB each

For security purposes, we recommend that you delete the scans from your computer after you complete your deposit and receive your receipt. Keep the check for 90 days in case there's an issue.

2 Launch e-deposit. When you get to "Select Scanning Method," choose "Scan, save and upload your check images manually."

3 On the next screens, we'll prompt you to "browse" to where your scans are located.

Everything else about the process is the same.
